For Immediate Release

New Carbon Fiber Leisure Furl Boom

Popular Leisure Furl Furling & Reefing Boom System Now Available in Carbon Fiber

Rancho Santa Margarita, CA - Forespar has introduced a carbon fiber version of their popular Leisure Furl in-boom mainsail furling and reefing system. This new boom offers all the same safety and performance benefits of the original Leisure Furl system with an extremely strong and lightweight carbon fiber boom housing.

All offshore versions of the Leisure Furl are now available in a Carbon Fiber version. Typical weight savings will be about 30% over the traditional aluminum version and will be available for boats ranging from 36 to 70 feet in length, with a maximum "P" length of 83ft. Available in any Awlgrip color, the new boom can be custom finished to match most any boat color scheme.

Forespar[®] has been manufacturing boat hardware in the United States for over 45 years and have been making the Leisure Furl system for more than 12 years. There are nearly 4,000 boats worldwide outfitted with Leisure Furl booms. Forespar's diverse line of marine products includes carbon fiber down wind poles, Nova Davit davit systems, Marelon[®] plumbing fittings and components, and numerous other marine related products. For a gallery of existing sailboats outfitted with Leisure Furl booms, customer testimonials and a demonstration video by John Kretschmer, go to www.forespar.com and click on Leisure Furl.
