

Multi Hull Sprit Kit

This kit is designed to easily retrofit an existing multihull with no bowsprit to one that has a bowsprit to improve downwind performance using reaching spinnakers and drifter sails.

Each sprit is specifically sized to match the boat and can be rigged to use with continuous line furling systems or custom configured. Depending on installation, the sprit pole can also be lifted up out of the way or removed.

The kit includes all parts necessary for installation except the stays. The kit comes with sprit pole, UTS cross bar bracket., end fitting and stainless steel tangs for the stays.

The pole is clear anodized to military standards and made of 6063-T6 marine alloy.

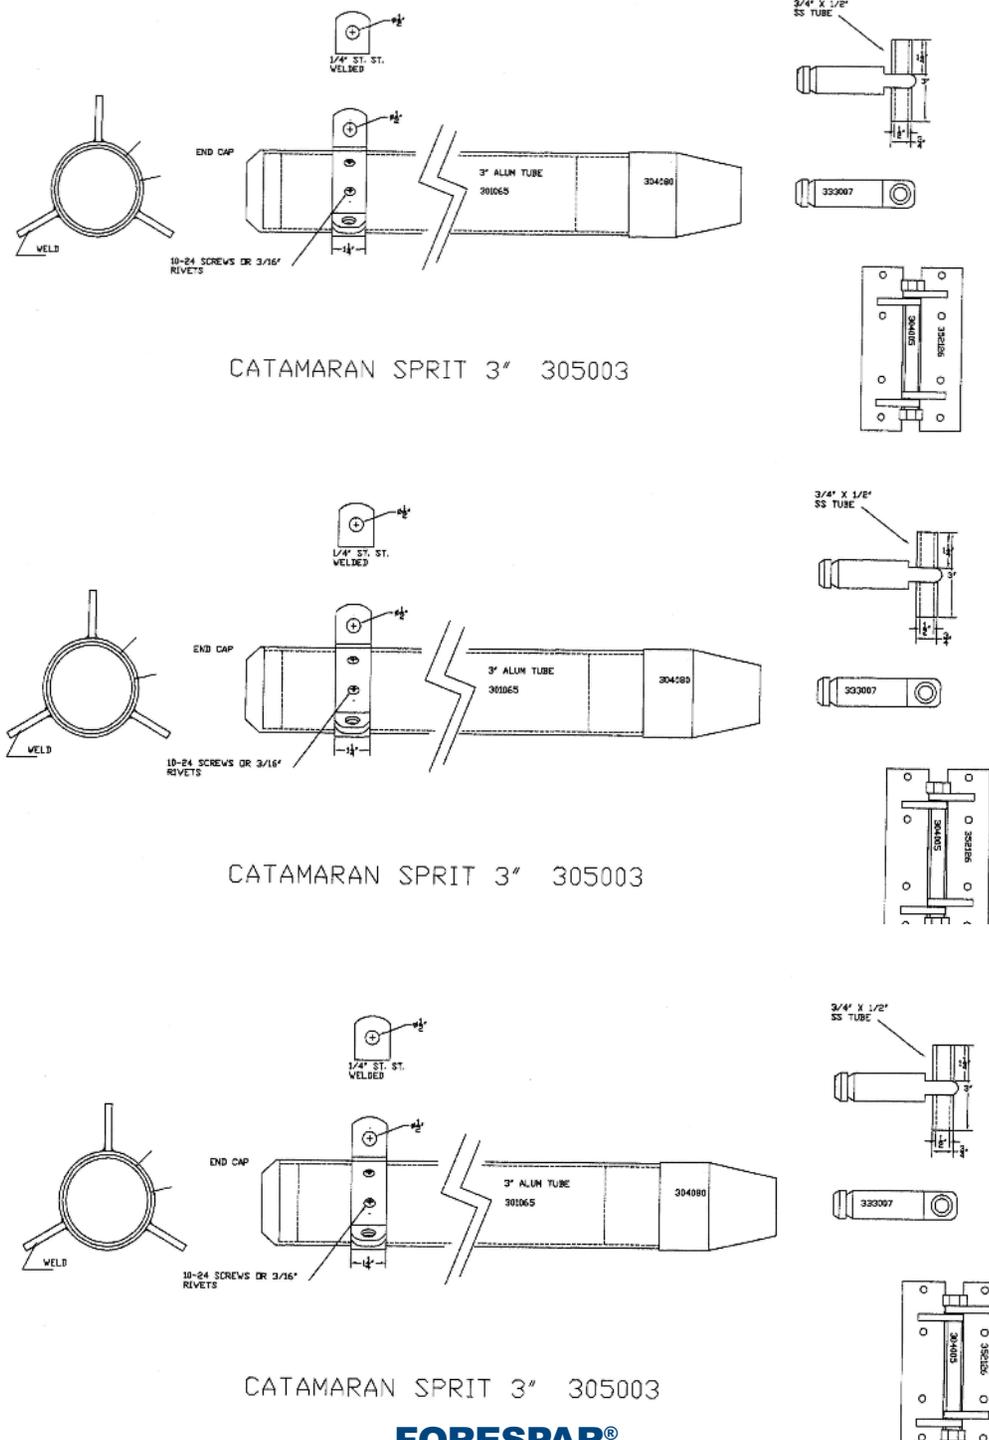

We strongly recommend that this product be professionally installed. For a list of Forespar dealers in your area please go to www.forespar.com
