The California Carbonwood™ Poles

CALIFORNIA CARBONWOOD™ POLES

Forespar[®], the world's largest manufacture of spinnaker and whisker poles has now made available simulated wood grained looking "Faux spruce" poles.

These are custom carbon fiber poles with wood simulated grain looking exterior which is actually a hard coat Awlgrip™ painted surface. The CCPs are a perfect addition to any fine wood yacht giving the warm look of traditional wood yet the strength and lightness of today's carbon fiber.

Pole sizes from 3" – 6" are standard, larger sizes are available. Each pole is fitted with Forespar's "Ultra™" light weight end fittings for strength and durability.
