

FORESPAR®
SPINNAKER POLES

STAINLESS STEEL BALL

lets sailors chose a alternate method of tripping a spinnaker pole

Forespar® has just introduced the newest design change in our lightweight "Ultra" spinnaker pole end fittings for 3" & 3 ½" spinnaker pole ends.

This new design allows the bow man to activate the pole end **AT THE END OF THE FITTING** should a trip line fail or if used on poles without full length trips (whisker poles). The S/S "ball" shown in the photo shows the anti-rotational pin that now protrudes to allow activation of the trigger at the ends.

This is done with a slot which allows the piston pin to travel. In addition, the piston spring is longer so it now has more closing force.
