### “ULTRA LINE” of Composite End Fittings

In 1996 Forespar® introduced the “Ultra” line of composite end fittings for both whisker poles and spinnaker poles. Since then, thousands have been used worldwide on racing and cruising boats in both carbon or aluminum poles making them the most popular end fittings on the market.

**The Ultra Ends** are half the weight of their aluminum counterparts and just as strong.

In 2004, Forespar has come through with another design break through with the addition on all “UTR” 3” and 3 ½” trigger style ends of an adjustable end fitting. With the addition of an adjustment screw for the trigger spring tension, these new ends are now “adjustable” in how easy or how hard the trigger release is set. It’s simple, effective and allows adjustability for heavy or light air, heavy handed rock stars or everyday sailors.

**Ultra Ends** only require a screwdriver -- and in seconds, the trigger tension can be set to your foredeck crew’s personal preference!
