22322 Gilberto Rancho Santa Margarita, CA 92688

The **Nova Lift™ with Winch** is designed specifically for use on powerboats or any boats that do not have an auxiliary winch to assist the loading and unloading of heavy objects. Lift outboard motors, pets, dive equipment, fish and more. Compliments all man overboard recovery systems for emergencies.

For years Forespar has sold the **Nova Lift™** to the sailboat market where each boat had a winch already in place to give a power assist. Now there is a Nova Lift™ with a winch mounted directly on the lower stainless steel tube for ease of lifting objects.

The **Nova Lift™ with Winch** unit has the same-patented self-feeding tube that allows the line to be quickly rigged and the entire unit can be easily disassembled for convenient storage when not in use or cruising. No messy block and tackle system to coil and untangle.

Includes a 2-1-block assembly which can be made into a 4-1-purchase system with additional blocks (not included).

Rotates 360 degrees under load, electro polished #304 stainless steel, 220lbs safe working load (upper arm distortion occurs at 430lbs). All rail-mounts and deck mounts included.

Forespar part #153312, Nova Lift with winch. Retail \$600.00
