

FOR IMMEDIATE RELEASE

June 2005

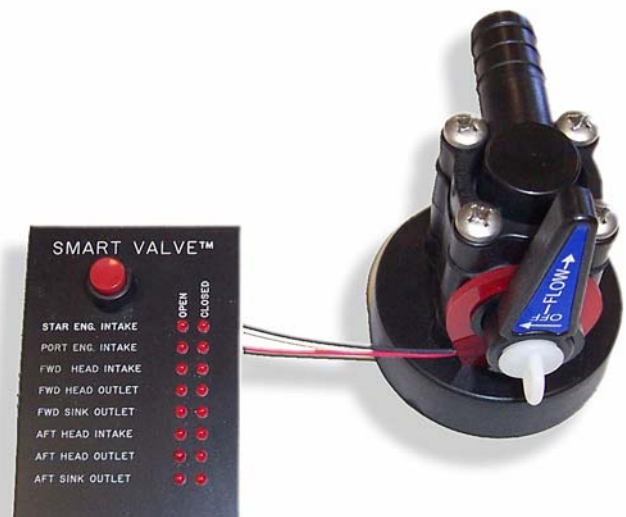

Forespar Smart Valve™ Integrated Plumbing System for boat builders (OEM).

THE NEW MARLEON® SMART VALVE™ SYSTEM IS NOW AVAILABLE AS PART OF THE "93" SERIES VALVES

Most boating safety organizations and boat builders recommend that when a boat is left unattended for any length of time that all Seacocks (valves) **BELOW THE WATERLINE**, should be closed to prevent accidental flooding and/or sinking.

SAFETY & CONVENIENCE

- 4 valve, 8 valve and 12 valve panel display
- 22 gauge wired tails for easy installation
- Latest micro electronics and compact LED lighted panel
- 12v LED bulbs with momentary switch for low power drain
- Terminal blocks on display panel backs for quick installation

The new **Smart Valve™** system enables quick and easy monitoring of seacocks in the boat. Now a light on the instrument panel will tell you if critical valves such as engine intakes and head outlets are open or closed
